

Arrow Machine Works Provides Long Cylindrical Grinding Services up to 240" capacity with a broad wheel selection giving them the ability to grind a wide range of overlays and hard coatings. Nation wide service.

WEBWIRE – October 24, 2012

Portland, OR, USA, October 24, 2012 – Arrow Machine Works has 45 years of precision machining expertise and specializes in Large Cylindrical Grinding Services. Grinding capacity from 2" up to 36" in diameter and up to 240" long.

"We have the ability to grind many types of overlays. We have the right wheel for the job," said Alek Drakos, GM.

The G2 Specialty Precision Cylindrical Grinder provides close tolerances and the ability to grind almost any overlay. Some of the overlays include: Tungsten Carbide, Hardface, HVOF, Thermal Spray, N5 Hardface and C6 Hardface.

Speciality Wheels include: Silicon Carbide and Diamond

Arrow Machine Works has extensive experience in Grinding for a variety of industries which allows them to offer fast service at competitive prices. From a one part run to large production runs, no project is too large or too small.

Founded in 1967 by Tony Drakos, Arrow Machine Works is a family owned and operated precision CNC machining company that provides fast and professional service on-time. Nation wide service.

Serving the Department of Defense, Aerospace, Oil and Nuclear.
